# How to Select the Proper Caster & Wheel

There is no simple formula or rule that can be followed in selecting the proper casters. Many varying and individual factors must be balanced to make the selection that will do the best job for you. The following are several of the more important considerations.

**Load Weight.** The heavier the load, the larger the wheel required for the caster. The weight of the load also influences the mobility of the wheel. Roller or ball bearings are recommended for loads over 400 pounds. Weight capacities are shown for each caster in this catalog.

Floor Conditions. Make sure the wheel you select is large enough to pass over cracks in the floor, tracks, moldings and other obstructions. For floor protection on linoleum, tile, carpet, etc., use polyurethane or Performa rubber wheels.

Unusual Conditions. Each wheel material has certain characteristics which will give the best results where unusual conditions exist. For example, where acids, oils, chemicals and other conditions harmful to rubber are present, Colson polyurethane, polyolefin, Maxim, phenolic or steel wheels are recommended. Check conditions, then select the caster and wheel.

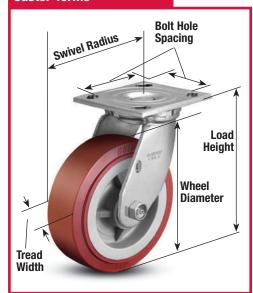

Rolling Ease. The larger the wheel diameter, the easier it rolls. Roller bearings carry heavier loads. Ball bearings roll easier but carry lesser loads. When possible, use the largest ball bearing wheel for best results.

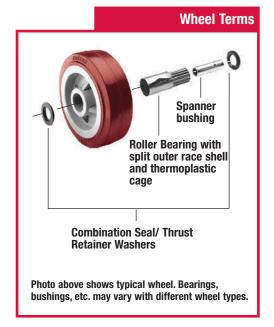

Extreme Climates. Room temperatures are no problem for most casters. But extreme cold or heat can be a problem. Colson helps solve this problem with "Colson 45"—the green lube which assures caster rolling ease from 45°F below zero to 260°F above. It's standard on most Colson casters. (Note: Some wheel types should not be used in extreme temperature ranges. Consult factory.)

Your Local Distributor. Colson casters are available from stocking distributors across the U.S., Canada, & Mexico. Each is a caster specialist who can help you select the proper caster to suit your needs. Visit our website

# **Caster Combinations for Trucks**

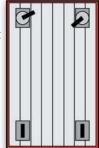

In building, repairing and refurbishing mobile equipment, various effective caster combinations may be used. Several types of mountings are illustrated below.

# Three Swivel.

For barrel dollies and small portable machines. Affords excellent maneuverability. Be sure to select casters designed to take the weight load on three casters rather than the usual four.

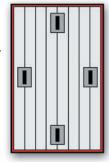

**Two Rigid, Two Swivel.**Most practical and

inexpensive arrangement for straight and/or long distances. Can be used for heavy or medium loads, depending upon the weight capacity of the casters selected.

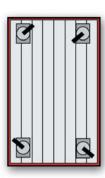

**Tilt Mounting.** A tilt mounting is the most economical, but should be limited to lighter loads.

The tilt is best when the load wheels are 1/8" taller than the balance wheels. Not recommended for use on ramps.

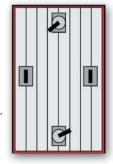

Four Swivel. Where a side motion is frequently needed, the four swivel arrangement is excellent. If the casters are equipped with swivel locks, this mounting is also practical for long straight travel as well as use on ramps. A most versatile arrangement.

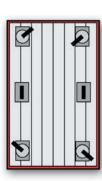

# **Diamond Mounting.**

Two rigid and two swivel casters, but the diamond shaped mounting greatly increases maneuverability. This mounting is not recommended for ramps.

# Four Swivel, Two Rigid.

This is a level mounting design for heavy loads and long trucks. The two rigid casters help to distribute and reduce the load on the swivel units and thereby maintain good maneuverability and easy steering.

# Understanding Our Model Numbers

# **Caster Model Number**

# **PREFIX**

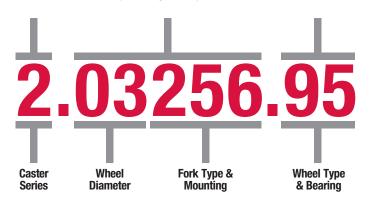

The prefix number shows the caster Series: 1 thru 8 Series with capacities ranging from 60 lbs to 6,000 lbs each.

# **BODY**

The body number shows the wheel diameter and type of fork mounting (swivel, rigid, stem).

# **SUFFIX**

The suffix number shows the type of wheel material and bearing.

The above caster model number is a 2 Series caster with swivel top plate fork and polyurethane tread wheel (HI-TECH).

Note: The replacement fork model number is the same as above except the wheel suffix is not included (For example 2.03256).

# **Wheel Model Number**

# **PREFIX**

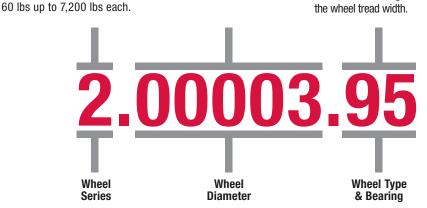

# The prefix number shows the wheel Series: 1 thru 8 Series ranging from

# **BODY**

The body number shows the wheel diameter.

# **SUFFIX**

The suffix number shows the type of wheel material and bearing, and when applicable, the wheel tread width.

The above caster wheel model number is a 2 Series wheel with a diameter of 31/2", made with polyurethane tread and ball bearing.

Note: The diameter code is usually, but not always the diameter of the wheel (for example, the diameter code 3 could denote 3", 31/4" and 31/2" wheels). Please check wheel chart for actual diameter of wheel.

# IMPORTANT NOTICE • CAPACITY RATINGS

Caster and wheel capacities shown in this catalog are based on normal operating conditions as defined by the Institute of Caster and Wheel Manufacturers (ICWM). Normal operating conditions, as defined by the ICWM, consist of manual operations on a relatively smooth surface (such as concrete) with normal minor obstacles. All bearings must be properly lubricated. Conditions of excessive temperature and/or dirt will reduce ratings. **Do not exceed the capacity ratings published in this catalog.** 

# CUSTOMER RESPONSIBILITIES

- 1. If caster stem is to be screwed into customer equipment, the customer must add a washer to the stem that will cover the incomplete threads and support the upper race.
- The stem shoulder must fit tightly against the customer equipment.
- 3. It is the customer's responsibility to mount the caster in a workmanlike manner so there will be no risk to operator safety.
- 4. It is the customer's responsibility to determine the fitness of the caster for its application.

# HIGH IMPACT S O L U T I O N

# **Colson's Enforcer kingpinless casters**

are well-suited for applications where shock loading, impact, and rough terrain cause failures in conventional kingpin swivel casters.

Kingpin casters are most common in the marketplace, but can often fail in rigorous applications where impact shocks and towing are present. This is because the kingpin that holds all swivel components together can stretch or bend from stress and impacts over time, which will cause swivel failures.

Enforcer kingpinless casters have a forged precision steel raceway, where large ball bearings lock the top plate and yoke base together—eliminating the need for a kingpin. This allows for greater load and shock distribution, longer life, and easier swiveling. Best of all, there is zero chance of kingpin failure.

# Why Enforcer Kingpinless Casters?

- Eliminates kingpin failures
- Perfect for applications with high impact, shock loading and rough terrain
- Single ball raceway allows less "play" in the swivel overall
- Available in 4, 6, 7 and 8 Series with capacities up to 6,000 lbs each caster
- Applications include towline, aerospace, automotive and tire manufacturing

# **Understanding Bearing Options**

# **Delrin® Bearing**

Delrin, a DuPont engineered plastic, is extremely durable under a wide range of temperature and humidity conditions, as well as is corrosion resistant.

Wheels with the Delrin bearings are well suited for applications where brine conditions, steam cleaning, or where excessive water or liquids are present. One piece or two piece Delrin bearing models are available (shown with spanner bushing). To order, see page 104.

# **Annular Ball Bearing**

Annular ball bearings are precision type bearings with machined, hardened raceways. This bearing is for applications where maximum rolling ease and quiet operation are needed and best suited for light to medium duty loads. The bearing is pre-assembled, and the entire unit is mounted in the wheel.

# Precision Sealed Ball Bearing (Prec. Ball)

Recommended for maximum rolling ease with no maintenance lubrication required, this quiet operating bearing is for medium duty to heavy duty loads. This bearing is available on all Endura Solid Elastomer and 2" tread width non conductive Performa Rubber wheels and is standard on all Triumph, Conquest and Commander HD wheels. Now available for Performa hand truck wheels!

To order, see page 104.

# **Pedestal Precision Ball Bearing (PPBB)**

This bearing is perfect when excellent rolling ease and quiet operation are required for your application. There is no maintenance grease required. The integrated spanner bushing makes installation easy. Now available in stainless steel, too!

To order, see page 104.

# **Plain & Sleeve Bearing**

Plain and sleeve bearings provide a metal sleeve inserted in a wheel to rest directly on the axle. This option is only recommended when rolling ease is less critical. To order, see page 105.

# **Bronze Bearing**

The bronze bearing is durable under a wide range of temperature and humidity conditions and is corrosion resistant. It is highly recommended for high heat (up to 350°F) or wet applications (shown with spanner bushing). To order, see page 104.

# **Roller Bearing**

The roller bearing is capable of carrying a greater load than the same size diameter ball bearing. It has a split outer race shell into which the roller assembly is inserted.

Standard Colson roller assembly features hardened steel rollers enclosed in a thermoplastic case on 1-1/2" and 2" tread width wheels. Metal cage roller bearings are available (Specify WB29) and are standard on wheels with tread widths of 2-1/2" and larger. Combination seal/thrust retainer washers protect the bearing from dirt, water, and chemicals. They also help absorb thrust friction (Note: roller bearing must be used with hardened spanner bushing or hardened shaft). To order, see page 104.

# **Torrington-Style Roller Bearing**

Colson's Torrington-style caged drawn cup bearings have a steel cage that provides inward retention of the needle rollers. This design provides maximum cage strength consistent with long service life. This bearing is available on 2" tread width wheels only. (Note: Must be used with hardened spanner bushing or hardened shaft.) To order, see page 104.

# Plastic & Metal Thread Guards

Designed to keep lent, thread and other soft materials out of bearings.

Certain industries and institutions find that excessive amounts of lint, thread and other soft materials have a tendency to work into caster wheel bearings. Wheel thread guards help overcome this problem. The thread guard does not revolve and thus forces thread to deposit away from the wheel bearing, not to mention it greatly improves the caster's appearance. Colson offers both plastic and metal thread guards. Plastic

thread guards are more flexible and will not rust or corrode making them ideal for wash down applications. Metal thread guards have a zinc plated finish on 1-3 Series wheels and a galvanized finish for 4-7 Series models to protect against corrosion. To order on a caster, specify "TG1" for metal and "TG2" for plastic thread guards. To check for availability on caster models consult factory (see page 108).

# PERFORMA wheels OFTEN IMITATED, NEVER DUPLICATED.

TOUGH ENVIRONMENTS

IMPACT & SHOCK PROTECTION

REJECTS FLOOR DEBRIS

**Performa Wheels** are the market's most superior soft tread wheel. Competitors from around the world have attempted to copy this innovative and unique wheel since its release in 1993. Performa is the original, and it's **manufactured right here in the USA in more sizes and treads than ever before.** 

# WHY PERFORMA?

- Easy rolling and turning for ergonomic advantages
- Quiet rolling, impact resistant and very floor protective
- · Absorbs shock to help protect equipment
- Maximum weather-ability and resistance to chemicals, water and steam
- USA-Made for fast lead times and the highest quality
- Rejects floor debris, such as metal shavings, for long service life

The Performa wheels are in stock and ready to ship. Contact your Colson representative for more information, quotes, samples, or to place your order today!

Performa wheels offer the advantages of both hard and soft tread materials in a single wheel. Like a hard tread wheel, Performa rolls easily and is very durable. Like a soft tread wheel, it rolls quietly, protects floors and resists impacts with a cushion ride. It also features maximum weatherability, low temperature flexibility, resistance to chemicals, water and steam, and rejects floor debris such as metal shavings. Non-marking thermoplastic elastomer tread is permanently bonded to durable polyolefin wheel core.

Temperature range: -45°F to +180°F intermittent service (120°F continuous service).

Hardness: 65(±5) Durometer Shore A scale.

**Flat Grey Tread** 

Capacity up to 675 lbs each

Performa wheels offer the advantages of both hard and soft tread materials in a single wheel. Like a hard tread wheel, Performa rolls easily and is very durable. Like a soft tread wheel, it rolls quietly, protects floors and resists impacts with a cushion ride. It also features maximum weatherability, low temperature flexibility, resistance to chemicals, water and steam, and rejects floor debris such as metal shavings. Non-marking thermoplastic elastomer tread is permanently bonded to ribbed polyolefin wheel core.

**Temperature range:** -45°F to +180°F intermittent service

(120°F continuous service).

Hardness: 65(±5) Durometer Shore A scale.

Performa wheels offer the advantages of both hard and soft tread materials in a single wheel. Like a hard tread wheel, Performa rolls easily and is very durable. Like a soft tread wheel, it rolls quietly, protects floors and resists impacts with a cushion ride. It also features maximum weatherability, low temperature flexibility, resistance to chemicals, water and steam, and rejects floor debris such as metal shavings. Non-marking thermoplastic elastomer tread is permanently bonded to ribbed polyolefin wheel core.

# Performa® Rubber Conductive Wheels

Many computer manufacturers and electronics companies require conductive wheels on assembly carts to eliminate static build-up and discharge. Although conductive caster wheels have existed for years, almost all of them mark floors. Colson has solved this problem with our selection of Performa Conductive Wheels. These models combine a soft cushion ride with a non-marking tread design. All wheels feature a cushion grey Performa tread bonded to a black Polyolefin wheel core. Performa Conductive wheels have been rigorously tested and approved by an independent lab and meet the requirements of federal specification FF-C-88C. This specification requires an average electrical resistance of less than 250,000 ohms. For other wheel sizes, please consult factory for availability.

# Performa® Rubber **Conductive Wheels**

**Conductive Flat Grey Tread** 

Capacity up to 500 lbs each

Many computer manufacturers and electronics companies require conductive wheels on assembly carts to eliminate static build-up and discharge. Although conductive caster wheels have existed for years, almost all of them mark floors. Colson has solved this problem with our selection of Performa Conductive Wheels. These models combine a soft cushion ride with a non-marking tread design. All wheels feature a cushion grey Performa tread bonded to a black Polyolefin wheel core. Performa Conductive wheels have been rigorously tested and approved by an independent lab and meet the requirements of federal specification FF-C-88C. This specification requires an average electrical resistance of less than 250,000 ohms. For other wheel sizes, please consult factory for availability.

**Temperature range:** -45°F to +180°F intermittent service (120°F continuous service).

Hardness: 75(±5) Durometer Shore A scale.

#### IMPORTANT NOTICE

# Performa® Rubber Hand Truck Wheels

### **Flat Tread**

Capacity up to 350 lbs each

**Center Hub Design.** This black tread wheel is a light weight, high performance hand truck wheel that rolls longer, quieter and smoother without marking floors. The exclusive wheel design features a zerk fitting for the wheel bearing and provides maximum rolling ease for greater maneuverability on the job. The exclusive wheel tread material won't pick up gravel or floor debris, and this wheel performs better than a pneumatic tire...yet never goes flat! Like all of our Performa models, the wheel provides maximum shock absorption for a cushioned ride and will not flatspot... even under load. The materials give superior weather resistance and lower temperature flexibility, as well as a high resistance to chemicals, acids, water and steam.

**Temperature range:** -45°F to +180°F intermittent service (120°F continuous service).

**Hardness:**  $55(\pm 5)$  Durometer Shore A scale.

The exclusive wheel design features a zerk fitting for the wheel bearing and provides maximum rolling ease for greater maneuverability on the job. The exclusive wheel tread material won't pick up gravel or floor debris, and this wheel performs better than a pneumatic tire...yet never goes flat! Like all of our Performa models, the wheel provides maximum shock absorption for a cushioned ride and will not flatspot... even under load. The materials give superior weather resistance and lower temperature flexibility, as well as a high resistance to chemicals, acids, water and steam.

**Temperature range:** -45°F to +180°F intermittent service (120°F continuous service).

Hardness: 55(±5) Durometer Shore A scale.

If you are looking for a lower-cost replacement for polyurethane... look no further. This engineering miracle is non-marking and offers good ergonomic performance. Plus, it does not break down in water/steam, and it does not squeak like polyurethane wheels. Since it is made in the USA, like our other Trans-forma wheels, the lead times are much better than competitive wheels. The multipurpose design is well suited for a variety of applications including (but not limited to): food processing, poultry processing, dairy carts, laundry carts, and in plant mobility equipment.

Temperature range: -45°F to +180°F. Hardness: 40(±5) Durometer Shore D scale.

# Endura Solid Elastomer Wheels

Capacity up to 1200 lbs each

When you need a wheel to roll easily under heavy loads, Colson offers the perfect solution. Endura wheels out-perform most conventional caster wheels on the market. The secret is Colson's solid "monoform" wheel construction. With this unique design, wheel tread and core are molded as a single unit. This eliminates wheel tread separation and bond failure.

Colson's exclusive solid elastomer compound delivers greater durability than conventional metal, rubber, plastic, polyurethane and phenolic wheels.

Colson's severe and comprehensive test procedures prove Endura wheels outlast competitive solid elastomer wheels by more than 50%! Colson test results also show that Endura wheels start rolling, keep rolling and swivel easier than our competitors.

Even in continuous operation, these wheels produce extremely low heat build-up making them perfect for tow-line applications (precision ball bearings required).

Endura wheels resist most chemicals, oils, greases, petroleum products and solvents. In addition, Endura non-marking wheels offer excellent resistance to chipping, cracking and flat-spotting. Superior impact strength and abrasion resistance further enhance durability.

**Temperature range:** -45F° to +230°F. **Hardness:** 63(±5) Durometer Shore D scale.

# Moldon Nylon Aluminum Core Wheels

Capacity up to 1500 lbs each

Brown nylon tread is molded in, around and through slots in an aluminum wheel core. This mechanical tread locking system helps prevent tread bond failures under harsh operating conditions found in meat packing and food processing industries. A nylon wheel is recommended for applications requiring a high resistance to water,

oils, gasoline, grease and certain salt solutions. Nylon is also resistant to paints and lacquers, cosmetic preparations, detergents, aerosol preparations and animal and vegetable fats. Note: Nylon tread wheels bonded to a thermoplastic wheel core are available, consult factory.

**Temperature range:**  $-45^{\circ}$ F to  $+180^{\circ}$ F (If metal retainer washer used, temperature range is  $-45^{\circ}$  to  $+250^{\circ}$  F).

# **Commander HD Wheels**

Capacity up to 7200 lbs each

The Commander HD wheel is perfected for superior performance under heavy loads (2,000-7,200 lbs. each) and abusive impacts. Critical applications for this wheel include: die carts, engine hoists, ground support equipment and much more. The unique and durable Nylatron® wheel material provides floor protection where steel, iron or phenolic wheels do not. The wheel's tread resists moisture and most chemicals, making it suitable for corrosive environments. The slightly crowned tread profile provides better mobility than flat tread wheels.

**Temperature range:**  $-30^{\circ}$ F to  $+220^{\circ}$ F. **Hardness:**  $80(\pm 5)$  Shore D scale.

# Thermo® Wheels

#### Capacity up to 1100 lbs each

Thermo wheels feature a standard operating temperature range from -70°F (continuous service) to +525°F (intermittent service, +480°F continuous service). These wheels are molded from an exclusive engineered resin compound that offers non-marking floor protection, near zero water absorption, high load capacities and long service life. A special manufacturing process enables the wheels to retain a consistent bearing bore even when exposed to elevated temperatures. Furthermore, Thermo wheels are 100% recyclable, and they are highly resistant to animal fats, vegetable oils and salt solutions. The life expectancy of Thermo wheels is three times longer than high-temp phenolic wheels, and they offer an equal load capacity. Unlike high-temp phenolic wheels, Colson Thermo wheels have no outer skin that can break and absorb water or other fluids.

**Temperature range:** -70°F to +525°F intermittent service

(+480°F continuous service).

Hardness: 85(±5) Durometer Shore D scale.

# **Polyolefin Wheels**

Capacity up to 900 lbs each

Designed for hard impacts and heavy loads, this wheel is injection molded from an exclusive Colson polyolefin compound. The unique ribbed design adds strength. Very light in weight, yet the impact strength of this wheel is far superior to hard rubber wheels. It offers superior resistance to most oils, chemicals, grease, gasoline, cooking fats and acids. In addition, the wheel is stain resistant, non-marking and provides zero water absorption.

Temperature range: -45°F to +180°F. Hardness: 70(±5) Durometer Shore D scale.

# **Cast Iron Wheels**

Capacity up to 600 lbs each

This wheel should be specified when excessive load weights are involved and floor protection is not a factor. Its high strength withstands sharp impacts. Cast Iron wheels should not be used if noise is of major concern or if loads are fragile.

# **Cast Iron Wheels**

Capacity up to 3000 lbs each

This wheel should be specified when excessive load weights are involved and floor protection is not a factor. Its high strength withstands sharp impacts. They should not be used if noise is of major concern or if loads are fragile.

**Temperature range**: -45°F to +180°F. If metal washers specified: -45°F to + 500°F (Roller, Ball & Sleeve bearings only).

Finish: Green alkyd enamel.

**Zerk Fitting:** Zerk grease fitting in hub is standard on wheel model numbers beginning with "7" and "8".

# **Forged Steel Wheels**

Capacity up to 4500 lbs each

This wheel is for exceptionally heavy duty service where floor protection is not a factor. Forged steel wheels have almost unbreakable construction, great wear resistance and take shock impacts very well in power drawn service. They should not be used if noise is of major concern or if loads are fragile.

**Temperature range:** -45°F to +180°F. If metal washers specified: -45°F to + 500°F (Roller bearings only).

Finish: Green alkyd enamel.

Zerk Fitting: Zerk grease fitting in hub on 21/2" and 3" tread

width wheels.

production lines. They are also used with hand or conveyor trucks. V-Groove surface and face are machine finished. These wheels handle loads from 800 to 6,000 lbs. per wheel. Designed for floor operation, or for track mounted flush or on top of floors, the wheel gives greater flexibility and better use of available floor space. Curves and switches may be used in track operation. Wheels are cast with reinforced section at maximum stress points. The type of track layout and casters are dependent upon floor conditions, area, distance and load. Consult your local Colson representative for advice on the proper caster for the most economic and efficient handling of your particular application.

# **Foot Activated Swivel Locks**

Capacity to 1500 lbs each

NOTE: Foot Activated Swivel Lock is field installable but requires notches in caster fork yoke base at  $90^\circ$  intervals.

No more back strain from bending down to activate a swivel lock. When the foot pedal is in the "up" position, a stainless steel spring forces a pin into one of the four slots on the swivel fork. This effectively locks the swivel in one of four positions at 90° intervals. To disengage the lock, simply press down on the foot pedal for free swiveling action. It's that easy! With this innovative product, you can quickly and easily convert swivel casters to rigid casters for straight-line tracking. When you need greater maneuverability, you can quickly convert from the rigid position back to full swivel. Quick. Easy. Less stress and strain. The Colson Ergonomic Advantage<sup>TM</sup>.

### **DirtBan Swivel Seals**

#### Keep dirt out and lube in for longer caster life.

Seals are recommended for applications where casters and equipment are exposed to regular washings such as hospitals, food processing plants, restaurants, meat packaging plants, laundries, bakeries and more. The seals keep dirt out of the swivel raceway and lubricant in. Colson polyurethane DirtBan seals help casters run smoother and last longer with very little drag on

the swivel action. They offer a high resistance to grease, oils, chemicals, detergents and water. To order on a caster, specify "SEAL". To field install the seals, simply remove the caster wheel and place seals in the upper and lower raceway. No special tools are needed. The DirtBan swivel seals are available on 2 and 4 Series casters. To field install the seals, see chart.

# 2 & 3 Series Dust Caps

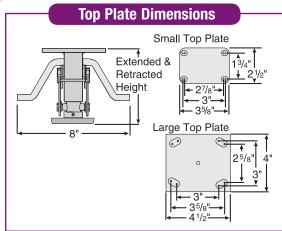

#### Protects swivel raceway from harmful debris.

Keep dust and debris out of the raceway for smoother operation and longer service life. Dust caps are available on 2 and 3 Series models only. To order the dust caps with a caster, specify "DC1". Dust caps are not field installable.

# **Floor Lock Brakes**

### **Floor Lock Brake Installation**

Recommended Floor Lock mounting position using four swivel casters.

Recommended Floor Lock mounting position using two swivel and two rigid casters.

Colson Floor Lock Brakes are designed for use on level surfaces and are not recommended for use on inclined surfaces. It is important to select a floor lock model that clears the floor when retracted. To adapt a floor lock brake to your present equipment, select a model with an extended height 1/16" to 1/4" greater than the overall height of the caster.

### **Features**

- Heavy duty industrial strength construction
- Foot pedal easily activates lock with foot pressure
- Non-slip, non-skid rubber brake pad holds securely on smooth or irregular floor. Designed for use on level surfaces.
- Durable, high-compression spring for heavy loads
- Conveniently located release bar retracts brake instantly with slight toe pressure to either side of the bar
- Attractive zinc plated finish

#### **Bearing Options**

#### **Delrin Bearing**

For standard two-piece bearing change 10th digit to "1" (Example: E4.06149.921.7). One-piece with steel thrust washers (Specify **WB11**).

#### **Pedestal Precision Ball Bearing (PPBB)**

To order change 10th digit in model number to "5" (Example: E4.06149.475).

#### **Ecoforma Wheels**

11/4" Tread Width Ecoforma Flat

Ecoforma wheels offer the advantages of both hard and soft tread materials in a single wheel. Like a hard tread wheel, Ecoforma rolls easily and is very durable. Like a soft tread wheel, it rolls quietly, protects floors and resists impacts with a cushion ride. It also features maximum weatherability, low temperature flexibility, resistance to chemicals, water and steam, and rejects floor debris such as metal shavings. Non-marking thermoplastic elastomer tread is permanently bonded to durable polyolefin wheel core.

**Temperature range:** -45°F to +180°F intermittent service (120°F continuous service).

**Hardness:**  $70(\pm 5)$  Durometer Shore A scale.

#### **Ecopoly Wheels**

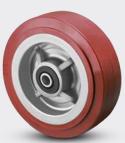

1<sup>1</sup>/4" Tread Width Ecopoly

Industrial strength polyurethane tread bonded to "ribbed" polyolefin core. This design adds strength for loads subjected to shock and hard impacts. Tread is molded in, around and through a ribbed extension of the core to prevent debonding. Standard colors are burgundy tread on grey core. **Not recommended for conditions of continuous operation such as tow-line, etc.** 

**Temperature range:** -45°F to +180°F. **Hardness:** 55(±5) Durometer Shore D scale.

#### **Polyolefin Wheels**

Polyolefin wheels are designed for hard impacts and heavy loads. This wheel is light in weight but offers impact strength far superior to hard rubber wheels. It also provides superior resistance to most oils, chemicals, grease, gasoline, cooking fats and acids. This wheel is stain resistant, non-marking and does not absorb water.

**Temperature range:** -45°F to +180°F. **Hardness:** 70(±5) Durometer Shore D scale.

#### Glass Filled Nylon Wheels

Encore Glass Filled Nylon wheels feature an exclusive, ultra tough thermoplastic compound that resists hard impacts and drop-shocks. The wheel is impervious to most chemicals, solvents, salts, gases, alkalines and steam cleaning and does not absorb water. When compared to other hard tread wheels, these Glass Filled Nylon wheels require less force to roll and swivel. It is ideal for many industrial and institutional applications and is NSF listed for the food service industry. The wheel is non-marking.

**Temperature range:** -45°F to +180°F (normal). To +350°F if you specify a bronze or roller bearing with mid-temp grease.

Hardness: 85(±5) Durometer Shore D scale.
